

Laborator 7-8

Pasul 1.

Ne creem un cont fictiv de facebook si ne logam pe facebook developer cu acesta.

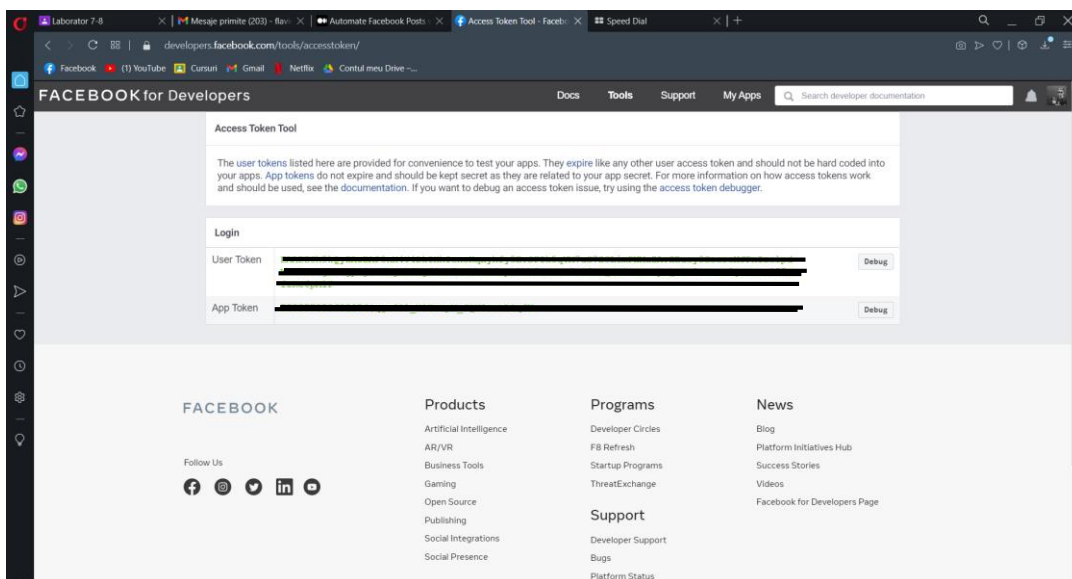

Pasul 2.

Intram pe tools > graph API explorer

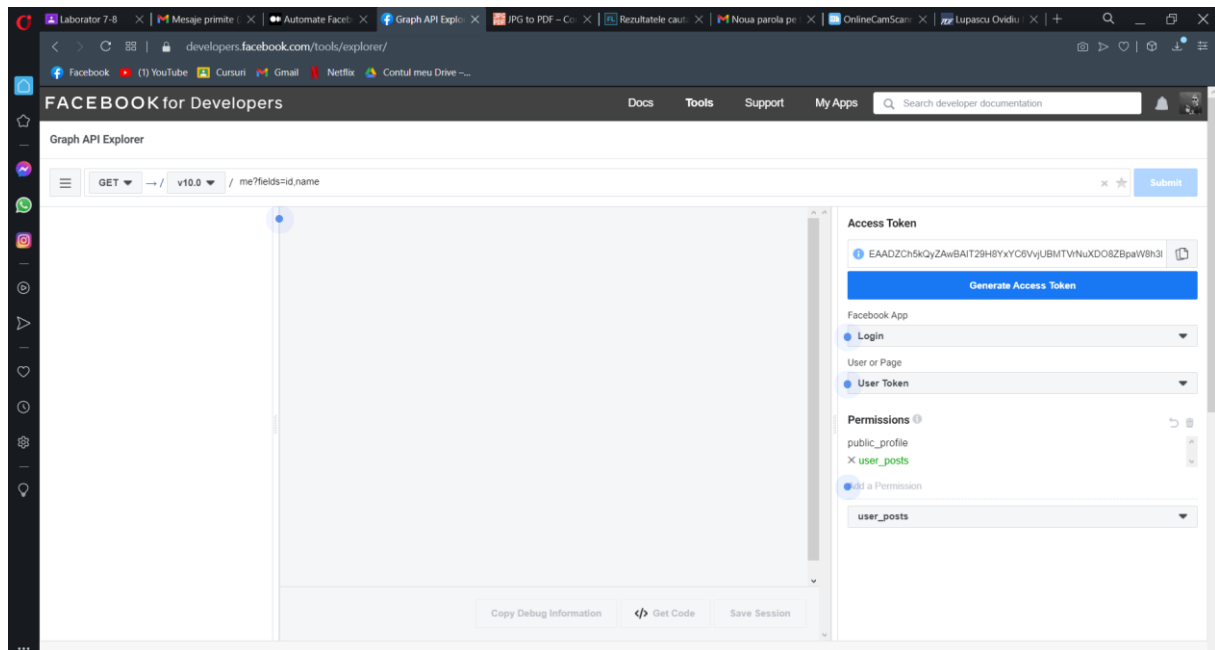

Pasul 3.

Intram in acces token tool si ne luam link-urile generate.

Pasul 4.

Adaugam permisiunile la Graphics Api

- pages_show_list
- pages_read_engagement
- pages_manage_posts
- public_profile

Pasul 5. Codul python

```
import requests
```

```
page_id_1 = 123456789
```

```
facebook_access_token_1 = 'Aici adaugam acces token-ul de mai devreme generat'
```

```
msg = `Avem faina de vanzare la faina.ro`
```

```
post_url = 'https://graph.facebook.com/{}/feed'.format(page_id_1)
```

```
payload = {
```

```
  'message': msg,
```

```
  'access_token': facebook_access_token_1
```

```
}
```

```
r = requests.post(post_url, data=payload)
print(r.text)
```
